(Twice Amended) A system of at least four components for a coating composition comprising.

- a component comprising at least one oligomeric or polymeric resin containing functional groups that react with isocyanate groups as binder,
- (II) a component comprising at least one polyisocyanate as crosslinking agent,
- (III) a component that comprises water and is substantially free from acrylate copolymers dispersed or dissolved therein, and
- (IV) a finely divided solid component that comprises at least one water-soluble or -dispersible finely divided solid acrylate copolymer

wherein the at least four components are not mixed.

32

3.

- (Twice Amended) The coating composition of claim 1, wherein the finely divided solid component (IV) is prepared by at least one of
  - i) spray-drying solutions, emulsions, or dispersions of the acrylate copolymers;
  - freeze-drying of solutions, emulsions, or dispersions of the acrylate copolymers;
  - precipitation of acrylate copolymers from their solution, dispersion or emulsion;
  - iv) emulsion polymerization of the acrylate copolymers;
- v) precipitation polymerization of the acrylate copolymers; and
- vi) grinding of the acrylate copolymers.

 (Twice Amended) A coating comprising the coating product of the coating composition of claim 1, wherein the coating is one of an automotive OEM finish, a refinish, a plastic coating, a topcoat, and a primer-surfacer.
